

Abstract of the Disclosure

To address the need for an apparatus and method for transcoding
5 among multiple wireless protocols, the present invention provides a
framework for more generalized transcoding. A voice processing resource
(e.g., 105) of a transcoder (101) receives the dynamic transcoding
attributes (e.g., 201-207) for a frame and then transcodes that frame
according to the requirements of the transcoding attributes. These
10 dynamic attributes may contain information such as the wireless protocol
involved, the frame type, the source type, the sequence number, the
delivery timing requirements, and the delivery mode of subsequent
frames.
